Dear Sir/Madam,

Re: Kirkan Wind Farm
Reference Number: ECU00001800

I'm writing to **SUPPORT** this application for renewable energy because:

- Climate Change is the greatest threat facing our planet, it's a climate emergency, and we need urgent action on the issue. We need renewable technology solutions, such as this proposed wind farm, to tackle Climate Change.
- These 17 turbines could provide enough electricity to supply the equivalent of around 50,000 homes per year.
- It would save the emission of around 101,000 tonnes of CO2 per year.
- Wind power doesn't produce emissions of acid rain gases, carbon dioxide or particulate matter unlike conventional power generation.
- Wind power is truly sustainable. Oil, coal, gas and uranium all eventually run out.
- Wind power helps to improve the UK's energy security.
- On-shore wind is the cheapest form of new-build electricity generation available in the UK.
- Wind power reduces the need for new expensive nuclear power stations that leave a toxic legacy of radioactive waste that remains dangerous for thousands of years.
- Most people support wind power.
- I regard the location as an appropriate site for a wind farm.

Dear Sir/Madam,

Re: Kirkan Wind Farm
Reference Number: ECU00001800

I'm writing to **SUPPORT** this application for renewable energy because:

- Climate Change is the greatest threat facing our planet, it's a climate emergency, and we need urgent action on the issue. We need renewable technology solutions, such as this proposed wind farm, to tackle Climate Change.
- These 17 turbines could provide enough electricity to supply the equivalent of around 50,000 homes per year.
- It would save the emission of around 101,000 tonnes of CO2 per year.
- Wind power doesn't produce emissions of acid rain gases, carbon dioxide or particulate matter unlike conventional power generation.
- Wind power is truly sustainable. Oil, coal, gas and uranium all eventually run out.
- Wind power helps to improve the UK's energy security.
- On-shore wind is the cheapest form of new-build electricity generation available in the UK.
- Wind power reduces the need for new expensive nuclear power stations that leave a toxic legacy of radioactive waste that remains dangerous for thousands of years.
- Most people support wind power.
- I regard the location as an appropriate site for a wind farm.
